Resuscitation and Trauma Seminar Preparation

BLS/AED · PBLS · ILS · ALS · PHTLS | Academic Review

Five study programmes | 12 thematic units per programme | Recall questions and oral-practice prompts

REVIEW PURPOSE

This memorandum considers the educational organisation of the seminar-preparation area, which offers structured revision across basic, paediatric, immediate and advanced life-support themes together with trauma-focused learning. The purpose is to document curriculum distinctions and responsible presentation, without suggesting participation in or completion of an accredited provider course.

EXTERNAL FRAMEWORKS CONSULTED

The European Resuscitation Council (ERC) Guidelines 2025 and the ERC descriptions of BLS, PBLS, ILS and ALS provider courses were consulted for scope and level. ERC course guidance distinguishes foundational lay-rescuer skills from advanced professional interventions. PHTLS belongs to a different training framework associated with the National Association of Emergency Medical Technicians (NAEMT); it must not be represented as an ERC certification.

OBSERVATIONS FROM THE APPLICATION

The interface describes five separate preparation programmes, each organised into 12 thematic units with recall and oral-practice exercises. This structure supports progressive revision and repeated retrieval practice. It does not, however, establish fidelity to the current proprietary course manuals, demonstration standards, instructor assessments or the latest local course-provider requirements.

PRIORITY CROSS-CHECKS

Before making any claim of course equivalence, every unit should be compared with the most recent applicable provider curriculum, algorithm and competency specification. Key areas include adult versus paediatric resuscitation, AED safety, team-role escalation, advanced airway procedures, scenario evaluation and trauma-specific decision-making. The limits of self-study relative to supervised practical assessment must remain explicit.

ACADEMIC POSITION

These are independent preparatory study materials. They do not confer ERC or NAEMT certification, replicate official attendance or assessment, or represent an endorsement from any named educational organisation.
